

DBMS Assignment

Ans1) To create a new user :-

Step1: Login with system or sys user.

Step2: Confirm system or sys user by using command show user.

Step3: Type following command for creating new user,

```
create user btech2021 identified by abcd ;
```

NOTE: Only creating user will not allow us to login. We need to give permission to new user and that can be done by the user who created it i.e. system or sys (whichever we choose).

Step4: Now type following command to give permission to user,

```
grant resource, connect to btech2021 ;
```

Step5: Now login with new user i.e. btech2021

```
